

DRONE INSPECTION

The use of cranes as part of the construction companies' work tools is a necessity in many large-scale projects. Mobile cranes are operating and in predefined timelines.

Crane inspections are an essential safety task mandated by OSHA (and its global counterparts). One of the costliest impacts of crane inspection is crane downtime which directly translates into loss of operating income.

An end to end software solution for crane inspection and surveying, The user easily plans a crane survey, and autonomous drones execute the mission with a press of a button. The enterprise receives full digitization of their field assets, resulting in better field insights.

- Revenue assurance: improved billing based on accurate data
- Decrease field time
- Decrease number people required per inspection
- Insurance costs eliminated
- Office time reduction (inspection, modeling, measurement...)
- Fully digitize asset base
- Easy to search and compare over time
